

6TMF, 6TAGM OPTIMA ADAPTER
Optima P/N: 242-0038,
NSN: 6160-01-453-0858
US Mil P/N 96-23654

Note: Battery needs to be secured with a hold-down bracket.

The 6T adapter simplifies installation when replacing military 6T sized batteries in various tactical equipment. **A great money saving alternative to 6TAGM batteries in some applications.**

The 6T adapter works with these Optima group size 34 battery models:			
Battery	NSN	Battery	NSN
34	6140-01-378-8232	34/78	6140-01-374-2243
34VX	6140-01-534-6466	D34M	6140-01-475-9355
34M	6140-01-441-4280	D34/78	6140-01-441-4272
D34	6140-01-450-0141		

When replacing the 6T sized battery with the Optima, be aware of your reserve capacity requirements. The smaller Optima battery is excellent for engine cranking, however it will not support engine-off accessories for as long as the much larger, heavy 6T battery.

Note: Verify compatibility with battery hold down bracket and power cables.

This adapter is **reusable**. Push down on the locking tab with a thin screwdriver to slide the adapter off of the battery.

Application examples:

6-K forklift

2000 Gallon water tanker

6T-AGMs, 88 lbs each

Red Tops, 40 lbs each

Batteries,
8 ft off the
ground

6TMF adapters, batteries and other accessory products can also be purchased directly from Military Battery Systems.
